

## Kraftex Varnish

This mineral-based product is used as a multi-purpose varnish to bring out the rich grain and lustre of quality wood. It may also be used to coat the sides of any decoupage project – to produce a glossy finish – or it may be used prior to pouring Kraftex Pratliglo over porous or oily wood, in order to prevent bubble formation.

### Application Procedure

- Apply at least 2 coats with a bristle brush to give a glossy finish.
- Allow to dry (15-20 min) between coats.
- If used prior to Kraftex Pratliglo application, allow to dry thoroughly (at least 45 min) before pouring the Pratliglo.
- Replace lid to avoid evaporation and store in a cool place.

Tip	Why
1. If you use this varnish on a decoupage project incorporating newspaper cuttings, make sure that you seal these items using Kraftex Decopodge Sealant.	1. Kraftex Varnish will render newspaper cuttings transparent and may cause ink to run. Sealing with Kraftex Decopodge Sealant will prevent this from happening.
2. Test compatibility of this varnish with the paint you are using on a scrap surface first.	2. Kraftex Varnish may cause certain paints to run.
